Common Types of Questions and Their Answers

Multiple Choice Questions (MCQs)

MCQs are prevalent in macroeconomics textbooks, testing knowledge of definitions, concepts, and basic calculations.

Sample Question: What is the primary goal of monetary policy?

Typical Answer: To control inflation and stabilize the currency by managing interest rates and the money supply.

Strategies for Answering:

- Identify key terms in the question
- Recall the main objectives of monetary policy from the chapter
- Choose the option that best aligns with these objectives

Discussion and Short Answer Questions

These questions require explanations, analysis, and synthesis of concepts.

Sample Question: Explain the relationship between inflation and unemployment in the short run.

Typical Answer: In the short run, there is often a trade-off between inflation and unemployment, known as the Phillips Curve. When inflation rises, unemployment tends to decrease, and vice versa. This relationship exists because rising inflation can stimulate demand, reducing unemployment temporarily.

Tips for Answering:

- Define the Phillips Curve
- Discuss the short-run trade-off
- Include relevant diagrams to illustrate the relationship

Numerical and Graph-Based Problems

These involve calculations related to economic indicators, such as GDP, inflation rates, or unemployment rates.

Sample Problem: Calculate the real GDP given nominal GDP and the GDP deflator.

Solution Approach: Recall the formula: $\text{Real GDP} = \text{Nominal GDP} / (\text{GDP Deflator} / 100)$

Insert the given values and perform the calculation

Example: If nominal GDP is \$15 trillion and the GDP deflator is 125, then $\text{real GDP} = \$15 \text{ trillion} / (125/100) = \12 trillion .
