Anatomy and Physiology of the Gastrointestinal Tract Understanding the anatomy and physiology of the GI system is foundational in diagnosing and managing GI disorders. The GI tract is a complex, coordinated system responsible for digestion, absorption, and waste elimination.

Major Components of the GI Tract

- Oral Cavity:** Includes the mouth, teeth, tongue, and salivary glands, initiating digestion through mastication and saliva secretion.
- Esophagus:** A muscular tube transporting food from the throat to the stomach.
- Stomach:** A muscular organ that mixes food with gastric juices, initiating protein digestion.
- Small Intestine:** Comprising the duodenum, jejunum, and ileum, this is the primary site for nutrient absorption.
- Large Intestine:** Responsible for water absorption, fecal formation, and hosting gut microbiota.
- Accessory Organs:** Liver, gallbladder, and pancreas aid in digestion through bile and enzyme production.

Physiological Functions

- Motility:** Coordinated muscular contractions propel and mix contents.
- Secretion:** Glands secrete enzymes, acids, and mucus necessary for digestion.
- Digestion and Absorption:** Breakdown of food into absorbable units.
- Immune Function:** Gut-associated lymphoid tissue (GALT) provides immune defense.
- Microbiota:** Resident bacteria influence health, immunity, and disease.

Common Gastrointestinal Disorders and Their Pathophysiology A thorough understanding of disease mechanisms is critical for effective diagnosis and treatment.

- Gastroesophageal Reflux Disease (GERD)** GERD occurs when the lower esophageal sphincter (LES) relaxes inappropriately, allowing gastric contents to reflux into the esophagus, causing symptoms like heartburn and esophagitis. **Pathophysiology:** Dysfunction of LES, impaired esophageal clearance, delayed gastric emptying. **Contributing factors:** Obesity, hiatal hernia, certain foods, smoking.
- Peptic Ulcer Disease (PUD)** PUD involves mucosal erosion due to imbalance between gastric acid secretion and mucosal defenses, often associated with *Helicobacter pylori* infection or NSAID use. **Types:** Gastric ulcers and duodenal ulcers. **Pathogenesis:** *H. pylori* induces inflammation; NSAIDs inhibit prostaglandin synthesis.
- Inflammatory Bowel Disease (IBD)** IBD includes Crohn's disease and ulcerative colitis, characterized by chronic inflammation of the GI tract with immune-mediated mechanisms. **Crohn's Disease:** Transmural inflammation affecting any GI segment, often with skip lesions. **Ulcerative Colitis:** Mucosal inflammation limited to the colon and rectum.
- Irritable Bowel Syndrome (IBS)** IBS is a functional disorder characterized by altered bowel habits and abdominal pain without structural abnormalities. **Subtypes:** Constipation-predominant, diarrhea-predominant, mixed. **Pathophysiology:**

Visceral hypersensitivity, motility disturbances, psychosocial factors.
