Operational Principles and Methodology

Step-by-Step Operation

Sample Preparation: Minimal preparation is required. Samples can often be analyzed directly or with simple mounting.

Parameter Setting: Operators adjust variables such as gas temperature, flow rate, and ionization voltage depending on the sample type.

Sample Introduction: The sample is positioned within the ionization zone using the handheld probe or mounted holder.

Ionization Process: The DART gas stream interacts with the sample surface, producing ions via processes such as proton transfer or adduct formation.

Mass Spectrometric Analysis: Ions are transferred into the mass spectrometer, where they are separated based on their mass-to-charge ratio (m/z).

Data Acquisition and Interpretation: Real-time spectra are generated, enabling immediate qualitative and quantitative analysis.

Advantages of Manual Operation

Manual control allows for: Precise targeting of specific sample areas. Rapid adjustment of parameters based on feedback. Flexibility in diverse and unpredictable field conditions.
